

Home Curfew RF Monitoring System

Triple tamper transmitters

- Simple, fast installation
- Highly secure
- 2 or 3-year batteries
- Re-usable straps
- Shock resistant and waterproof

3M™ Home Curfew RF Monitoring technology was developed with a long term view to customer technology needs. These RF Curfew Monitoring Systems are powerful, comprehensive tools, with a design based on a decade of cumulative field experience and market feedback. Whether communicating over landline or cellular networks, the RF Curfew Monitoring Systems help ensure our clients that their monitoring needs are met and securely performed, while enabling careful management of operational resources.

A Range of Operational Advantages

- **Multiple tamper detection mechanisms and malfunction alerts of local monitoring units**
- **Flexible schedule options & range settings**
- **Operational cost savings**
 - Efficient communication protocols result in fewer, shorter calls
 - Help reduce communication costs available in GPRS enabled cellular models
 - Multiple monitoring of up to 50 offenders by a single unit
 - Remote upgrade and update capabilities
- **Powerful back-up mechanisms**
 - Extended memory capacity for storing and processing a multitude of events
 - 48-hour back-up battery for power service breaks
