3M Electronic Monitoring has incorporated nearly two decades of extensive industry experience with leading location, communication and encryption technologies, bringing to market a premium two-piece tracking system.

Setting Standards in Remote Offender Supervision

- Versatile communication modules and tracking modes
- Cellular communication based redundancy functions
- Multiple anti-tamper measures
- Advanced encryption standard secures data communication
- Multiple communication means with tracked offenders
  - Two-way voice communication
  - Audible and/or vibrating alerts
  - Text messages displayed on the unit’s LCD
- Continued tracking functionalities during disrupted communication periods
- Stores up to 30 days of tracking data in non-volatile memory
- Web-based user configurable reports
- Individual schedules and zone restrictions
- Web access to tracking data for authorized users
- Remote firmware updates and upgrades

3M™ Two-Piece GPS Offender Tracking System
is also known as 2Track by Elmo-Tech or XT by Pro Tech Monitoring

- Lightweight design, only 6.5 oz./180 grams
- Unit case tamper
- Sealed, splash-proof and shock resistant unit
- 24 hour battery power

- Easy installation
- Weighs only 2.5 oz.
- 2 year battery life
- 7 day advanced notice before replacement
- Multiple tamper detection
Active, Hybrid or Passive – Varying Levels of Supervision Intensity

3M™ Two-Piece GPS Offender Tracking System can be activated in one of the three tracking modes, which differ on communication frequency and resulting supervision intensity. Offenders can be seamlessly switched from one mode to the other.

A Range of User Configurable Alerts

- Location limitations - geographic exclusion and inclusion zones
- Presence inside off-limit zones (“exclusion zones”)
- Leaving pre-defined authorized zones (“inclusion zones”)
- Multiple methods of officer notification - email, text, pager or fax

Completing Home Curfew Monitoring

3M™ Two-Piece GPS Offender Tracking System doubles as home RF monitoring unit and will report on technical events or violations of schedule restrictions via cellular or landline communication from offenders’ place of residence.

Domestic Violence Deterrence

3M™ Two-Piece GPS Offender Tracking System can serve as the technology backbone of domestic violence deterrent programs, whereby both the aggressor and victim are continually tracked to minimize potentially hazardous encounters. Similar 3M Electronic Monitoring systems have already been used in successful programs in Europe and the US, providing invaluable experience in operating this emerging application.

Empowering Supervision Programs Through Integrated Monitoring Capabilities

3M™ Two-Piece GPS Offender Tracking System can be applied as a separate measure or in combination with other monitoring or tracking tools. Interchangeability of field units and transmitters models enable the seamless transfer of offenders across different programs and monitoring applications for efficient case and resource management.

An Industry Leader

3M Electronic Monitoring is a global provider of leading presence and location verification technologies, designed for monitoring individuals in the law enforcement, corrections and security markets. The integration of 3M Electronic Monitoring systems in a variety of law enforcement applications is proven to be cost effective and reliable. The Company’s strategy is to focus on the provision of superior technology solutions while collaborating with prominent local business partners to ensure the optimized distribution and service of its systems worldwide. 3M Electronic Monitoring systems are employed by private operators and government agencies throughout Europe, Latin America, the Middle East, the Pacific Rim and the U.S.A. 3M Electronic Monitoring brings its customers and partners nearly 2 decades of industry experience and technology expertise. 3M Electronic Monitoring is part of Track and Trace Solutions within 3M’s Safety, Security and Protection business.
